A universal mission in innovative quality

A universal mission in innovative quality

Around the globe in *7 concepts*

Travelling around the globe in a universal mission to provide our customers with the best solutions in luxurious quality. That's what we want to show you in this special publication.

One world, various concepts and different continents.

Driven by passion, Forest is continuously inventing and improving various concepts behind the draperies. The Forest Shuttle is one of many results of this endeavour. Dutch Design and Made in Holland, the Forest Shuttle is the smallest motorized and most innovative drapery track system in the world. With sleek shapes and silent operation, it smoothly opens and closes curtains all around the world. Let's start the journey.

Dutch Design

Forest has been in business for more than 25 years, it all started with a simple and clever idea: the Forest KS Klick System.

The system rapidly conquered the Dutch market and people have loved it for its simplicity and quality.

It then quickly found its way around Europe, soon followed by an ever increasing product line, all developed with the same concepts in mind. Dutch Design characterizes design in the Netherlands, particularly product design.

More specifically, it refers to the design aesthetic common to designers in the Netherlands.

Dutch Design can be characterized as minimalistic, experimental, innovative, quirky, and humorous.

Dutch design is simple and powerful, so is the Forest Shuttle. In a sleek and functional shell

it houses the smallest motorized drapery track system in the world.

A person wearing a white cleanroom suit and a white hood is working in a factory setting. They are standing in front of a large piece of machinery with a control panel featuring several screens and buttons. The background shows other industrial equipment and a clean, well-lit environment. The overall scene is bathed in a cool blue light.

Ever since the beginning, product quality and a long life-span have always been key characteristics in Forest Group's products. With our own in-house Research and Development Center and own production facilities we are able to maintain the excellent quality level that customers demand and have grown accustomed to.

Finding solutions to challenging window decoration problems is a key part in our day-to-day product development efforts.

*Quality is never
a compromise*

Worldwide

Comfort on demand

When it comes to comfort, the Forest Shuttle lives up to its expectations.

Being able to open and close your drapes remotely, from the comfort of your chair, from your bed, automatically at programmed opening and closing times or even linked to variable sunrise and sunset times; how comfortable would you like to be?

Safe in every detail

Forest Shuttle motor technology has standard Touch Control and Declutch, which allows you to always open and close your draperies, whatever the circumstances. A comforting feeling. The Maintenance Department will love the system! Because of the features the system will not malfunction when moved by hand.

Living the life of luxury

Hidden from view, but present
more than ever, countless satellites
now orbit the earth, providing
comfort to people all over the world.

The Forest Shuttle offers a similar
experience by enhancing your
comfort even more.

The Forest Shuttle is the silent force
behind the opening and closing of
draperies all over the world.

Worldwide

Caring about energy and the environment

Being situated below sea level makes the Dutch ever more conscious of changes in the environment. This has resulted in an urge to come up with innovative solutions to protect the world around us. Clever solutions like draperies closing automatically when you leave the room, thereby saving energy by temperature control. It all starts with small, but noticeable, steps.

The opportunities of America

Forest Motorization arrived in America in 2005 and found its first home at the Venetian in Las Vegas. The Forest Shuttle landed in North America at the end of 2010 at the Trump Tower in Toronto.

The silent motor that is also strong enough to pull the heavy draperies used in hotel design, makes the Forest Shuttle an ideal choice for the American hospitality market.

Additionally, the Forest Shuttle has found a niche in American ADA hotel rooms, providing extra convenience for disabled guests.

Homeowners are attracted to the Forest Shuttle's affordable price and ability to integrate into various home automation systems.

High level of technology

Creating products today that are ready for the technology of tomorrow, that's what product development is all about.

The Forest Shuttle can be controlled with all central control systems available in the world today, and thanks to its versatile design, also for the world of tomorrow!

Forest continuously strives for perfection and innovation because customers from all over the world are demanding innovative and aesthetic solutions.
